

Data Model/Mapping

OnDataSuite (ODS) Ed-Fi API data consumption process:

1. The client provides the Read-Only All Resources Key and Secret for Texas Education Agency (TEA) iODS connectivity. For the 2024-2025 school year, locate the 2024-2025 Year row. Copy and paste the Key and Secret from TEAL, then click "Activate" to initiate the Vendor health check, which will verify the connection. This health check ensures that OnDataSuite can connect to all endpoints. If the health check fails, an error message will continue to display until the issue is resolved in the TEAL DMC with the correct claim set name of Read-Only All Resources. Once corrected, re-enter the Key and Secret and click "Update" to initiate the Vendor health check again.
2. Data is read and processed nightly. During this process, any changes made since the previous data pull are identified and updated within the ODS landing zone (local iODS copy). This comprehensive update includes both deletions of outdated information and edits to existing data, ensuring that the ODS landing zone maintains an accurate and current representation of the source data.
3. Upon the completion of the API pull, data is promoted according to the published Texas Education Agency (TEA) promotion logic. This promotion process involves transferring the data into the ODS tables, making it available for data analytic access within the ODS suite of applications. This ensures that the data is both current and accurately reflected for analytical purposes across all relevant applications.
