## Ed-Fi 4.x Student Entity Mapping

### Overview

This document defines the mapping of Frontline data to the Ed-Fi data standard.

#### Description

This entity represents an individual for whom instruction, services, and/or care are provided in an early childhood, elementary, or secondary educational program under the jurisdiction of a school, education agency or other institution or program. A student is a person who has been enrolled in a school or other educational institution.

### Object Triggering Logic

This table describes logic for triggering syncing of this object.

| Action | Trigger                                                                 |
|--------|-------------------------------------------------------------------------|
| Post   | When a student is added to a section then a record is sent to the ODS   |
| Put    | When a student is updated to a section then a record is sent to the ODS |
| Delete | When a student is deleted to a section then a record is sent to the ODS |
| My Key | per_id                                                                  |

Send one record for every student E/W enrolled in Ed-Fi fiscal year

| Property        | JSON Datatype | Identity | Cardinality | Definition                                                                                                          | Data Source                                                                            |
|-----------------|---------------|----------|-------------|---------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------|
| StudentUniqueld | string        | Yes      | required    | A unique alphanumeric code assigned to a student.                                                                   | UI: Maintain Student<br>DB:<br>PERSON.PER_STATE_UNIQUE_ID                              |
| BirthData       | object        | No       | required    | The set of elements that capture relevant data regarding a person's birth, including birth date and place of birth. | UI: Maintain Student<br>DB:<br>STUDENT.STU_CITY_OF_BIRTH,<br>TUDENT.STU_STATE_OF_BIRTH |
| Name            | object        | No       | required    | Full legal name of the person.                                                                                      | UI: Maintain Student<br>DB:<br>PERSON.PER_FIRST_                                       |

|           |        |    |                     |                                                                                    |                                                          |
|-----------|--------|----|---------------------|------------------------------------------------------------------------------------|----------------------------------------------------------|
|           |        |    |                     |                                                                                    | NAME,<br>PERSON.PER_MIDDLE_NAME,<br>PERSON.PER_LAST_NAME |
| OtherName | object | No | optional collection | Other names (e.g., alias, nickname, previous legal name) associated with a person. | UI: Maintain Student<br>DB:<br>PERSON.PER_OTHER_NAME     |
