

## Ed-Fi Certification - Availability Statement

Technology Provider Amplify

Product name mCLASS DIBELS 8th Edition and mCLASS Lectura

Ed-Fi Certification **Assessment Outcomes API v4**

Can access to the certified functionality require a separate fee? No.

The product functionality in the Product [referenced above] used to meet the Ed-Fi Certification [referenced above] is available in its entirety in the following geographies and product versions:

All Amplify customers have and will continue to have access to our full product functionality. Amplify does not restrict the availability of its functionality at all. It is available to all customers, including Local Education Agencies (LEAs) in Texas, where we currently operate. We ensure that a single product version is distributed to ALL customers, maintaining consistency and quality. Our product functionality does not require any additional fees, aligning with the expectations of the Ed-Fi Certification.

Amplify enrollment methods allow customers to configure the IDs to be used in reporting. For example, SIS ID, State ID, or District ID may be used for data mapping. The Texas solution to export data to Ed-Fi uses only State IDs.

The current system supports a single ODS scenario, enabling single URL/key/secret configuration per district.

*Instructions: use the space above to list the geographies and versions where the certified functionality is available. If required, geography and version information can be combined (e.g. "State of X version 9.2 and above").*
